Health & Well-being

Soraa Zeroblue™

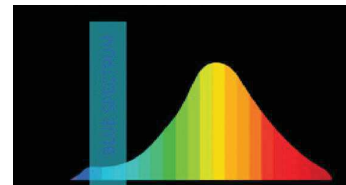

Soraa ZEROBLUE technology emits white light without the presence of blue light that has been shown to have a negative impact on sleep cycles. Our industry-leading violet LED light makes it possible to render colours and whites beautifully, even with a wide gap in the blue range, with a CRI value of 80 and an R9 value of 90.

Soraa ZEROBLUE™ LED
Soft white with no blue

Soraa Flicker Free

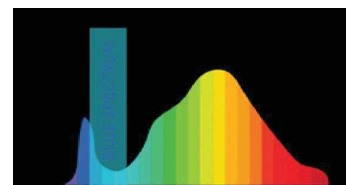

Many LED lights have an invisible flicker that the eye is not able to detect. This is called a “stroboscopic” effect and has been shown to cause headaches, eye-strain and fatigue. Soraa HEALTHY™ is built to the highest standards to prevent the negative side effects of invisible flicker in both dimmed and undimmed states.

Sleep LED
Reduced blue, unnatural yellow

No Buzz

We use high-quality materials and construction to soundproof the light emitted by Soraa HEALTHY™. We also test at every level of power to make sure there is zero buzz, even when dimmed.

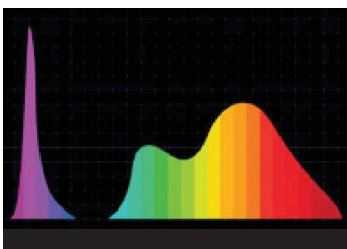

Standard LED
Large blue peak

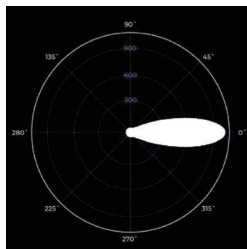

Dimmable

Not all dimming is created equal. Low-quality LEDs might buzz or visibly flicker at low power. Soraa HEALTHY™ lamps dim smoothly and look beautiful at any level of power, so people can enjoy blue-free light tailored to any ambience.
